Welcome to the Future of Airborne Video

Rugged Video is proud to release the new Commander Product line. The Commander product line is a set of solutions that automate the video capture process, allow for seamless uploading, and makes it easy for customers to share their videos online.

01 - Capture

High Definition Video is recorded to a USB flash drive in a format that allows easy uploading to YouTube and playback in most standard video players. Cameras can be mounted inside the cabin or out with STC mounting options available for most standard airframes. Controlled by GPS using waypoints, speed, and heading, the system can automatically: switch between cameras, play narrations or soundtracks, overlay text, and record video.

- Complete GPS Automation
- Full Length or Segmented Recordings
- Seamless Camera Switching of up to Four Views
- Soundtracks, Headset Audio, and Narration
- Credits & Closed Caption
- Fault Tolerant Recording with Internal Battery Backup
- WiFi Streaming to iPad, Tablet, or Smartphone

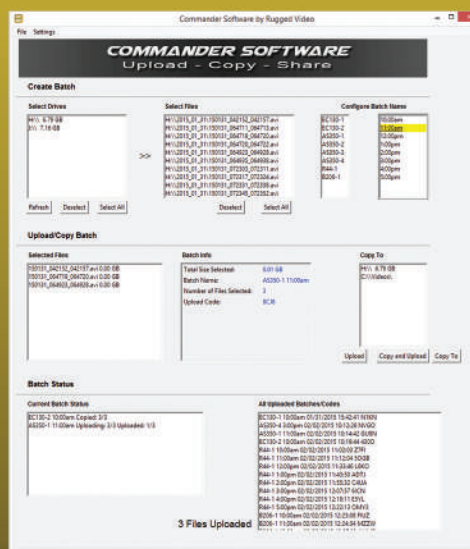

02 - Upload

Commander Software was designed to make it easy for busy tours to manage and sell videos. Simply insert the USB into the computer and the software will automatically find the videos files. The operator can then upload, burn, copy, or store the videos with a click. Uploaded videos are loaded to a webpage unique to that flight and code with a URL is sold to the customer.

- Upload to YouTube with Optimized Titles and Keywords
- Copy to Multiple USB Flash Drives
- Burn a Data CD or DVD
- Store Videos on a Local Driver or Server
- Options for Customization to Your Operation
- Creates and Uploads Unique Webpage for Each Flight

03 - Share

Videos that are uploaded via the Commander Software are linked to a webpage unique to that flight. Users access the link by typing a simple URL and a four character code, e.g. getourvideo.com/MKZ2. The webpage makes it easy for customers to view and share their videos. There is also an option to order a Blu-Ray or DVD for an additional fee.

- Enhanced Value for The Customer
- Easy to Share Videos on Social Media
- Add Content such as Affiliate Ads or Referral Promotions
- Increase Post Flight Revenue with DVD/Blu-Ray Sales
- Eliminate the Expense of Providing USB Digital Copies
